

PER-P 100 paver edge restraint system

Part No.: 2102

Application area

PER-P 100 is part of our PER paver edge restraint range. The PER-P 100, a black coloured plastic paver edge restraint product with 100 mm depth, provides an aesthetically appealing finish to almost any application, including block pavements, garden paths or gravel strips. This product is extremely flexible for forming curves, straight lines and even 90-degree angles, giving a simple yet effective alternative to haunch in your edging by applying concrete.

Benefits

- ☑ provides for an aesthetically appealing finish – virtually invisible dividing lines between grass and other plant areas
- ☑ easy and quick to install, can also be used to create arches
- ☑ once installed, there need for a trimmer ceases to exist
- ☑ the grass next to it does not dry out
- ☑ also available in 45 mm depth

Specification suggestion

The ArchiGreen® PER-P 100 is a black paver edge restraint product with 100 mm depth. These edge restraint profiles primarily provide an aesthetically appealing finish to almost any application, including block pavements, garden paths or gravel strips. Supplied 'straight' they can be bent to shape on site to create curves and arcs. The 100 mm depth paver edge restraint profiles are also suitable to fulfil the role of ballast edge trims on extensive green roofs. The ArchiGreen® PER-P 100 paver edge restraint system is made from UV & frost resistant recycled polyethylene plastic. Measurements of the paver edge restraint profile: 1000×80×100 mm (L×W×H). Weight: 0.75 kg/lineal metre. Colour: black. Anchoring spikes are not included but are available and can be ordered separately.
